

**Electro-Shield™ is a long-lasting, residually active sanitiser for carpet and upholstery.**

### WHAT IT DOES

Electro-Shield™ binds to the fibres in carpet and upholstery for long lasting anti-microbial protection.

Electro-Shield™ is residually active and will keep sanitising textiles for up to 4 months from application. Most other sanitisers will lose effectiveness within seconds or minutes from application.

Electro-Shield™ kills 99.9% of bacteria and a range of other germs. When bacteria comes into contact with a textile correctly treated with Electro-Shield™, the Bacteria will usually be killed within 15 seconds.

Electro-Shield™ inhibits the growth of almost all types of mould and fungi.

The active ingredient in Electro-Shield™, Healthguard AMIC, is designed to kill viruses, specifically enveloped viruses which includes CoronaViruses. As at the 22nd of April 2020, Healthguard AMIC, is undergoing efficacy tests at 2 prominent universities to prove its' effectiveness at killing viruses.

*NB: Electro-Shield™ is not yet registered with the Therapeutic Goods Administration as a virucide and should not be sold as such until registration is complete.*

### HOW LONG DOES ELECTRO-SHIELD™ LAST?

The performance of Electro-Shield™ will dissipate over time and with regular wear.

To ensure that Electro-Shield™ remains active and effective, we recommend re-application every 4 months in residential situations and every 2 months in high traffic or commercial situations. In instances of very high use or traffic, we recommend more regular application.

Electro-Shield™ will last longer on carpets and textiles that are kept clean. Abrasive dry soils and oily soils will impact the long-term effectivity of Electro-Shield™. Accordingly, regular vacuuming is important and increased application frequency may be appropriate in a location with higher levels of soiling.

### USAGE

#### DILUTION

Dilute with water at a ratio of 10:1. Decant 700ml of Electro-Shield™ into an 8 litre Sprayer and fill with water.

#### APPLICATION

For carpet, apply 1 litre per 13 sqm room and groom into the carpet with a "Grandi-Broom".

On upholstery, apply 100ml per standard seating position (not wider than 80cm) and brush into the fabric with a "Handi-brush" or horse-hair brush.

For best results, do not walk on the carpet for at least 30 minutes after application, or sit on the fabric for 2 hours after application.
