

The following products are used in the for the completion of tile cleaning services:

Chemical usage

T & G LF (Low Foam): Alkaline tile cleaning product.

- Mix 4 to 1 with hot water and mop onto the tiles prior to agitation and extraction.
- Do not allow to dry before extraction as the product will need to be reactivated for effective removal

T & G Power: A high performance tile cleaning product designed for commercial areas, or very heavily soiled tiles where there is a high volume of cooking fats or oils.

- Mix 20 to 1 with warm water and apply to the affected areas

WARNING: This product is caustic and will damage metallic finishes.

Grout Restore 20: Acidic cleaning solution.

- Mix 4 to 1 with hot water and mop onto tiles prior to agitation and extraction.

Grout Restore 50: Acidic cleaning solution.

- Mix 4 to 1 with hot water and mop onto tiles prior to agitation and extraction.
- To be used only in specific situations with high levels of lime scale or efflorescence.

WARNING: This product is corrosive!

Oxyboost Plus: An oxygen bleach that adds oxygen to the diluted cleaning solution that it is mixed with.

- Add 60 grams (2 level scoops) to 5 litres of warm, diluted LF solution.
- Apply to the floor within 30 mins of mixing the Oxyboost with the cleaning solution.

Chlorosan: A chlorine bleach designed to treat mould and mildew stains.

- Mix 10 parts water to 1 part Chlorosan and apply to the stained area.
- Agitate, allow to dwell, and then extract.

Warning: Only use in a ventilated area and whilst wearing a respirator. Will bleach carpets.
