

Carpet Dry Cleaning Product Usage

The ElectroDry Carpet Dry Cleaning system is a unique process that achieves excellent cleaning results on almost all fabrics.

Chemical usage

Electro-Prespray: A unique heavy traffic lane cleaner used in the Electrodry carpet dry cleaning process.

- Apply neat using a 5-litre sprayer and then agitate into the carpet with a carpet rake or a bush under the rotary machine. Use as required.

Electro-1: Carpet Dry cleaning solution.

- Use neat, applying 300 to 350 ml per 13 square metre room.
- Do not allow to dry out before cleaning as it will lose effectiveness.

Electro-2:

- Mix 200ml E2 with 10 litres of water in your wringer bucket. This becomes the conditioning rinse into which the bonnet cleaning pads are immersed.

Performance Plus (Concentrate for franchisees): A neutral carpet and upholstery cleaning prespray for hot water extraction cleaning.

- Dilute with water 1:30 and apply to the carpet, agitate with a carpet rake or brush underneath the rotary machine and allow 10 minutes dwell time before cleaning

Platinum Plus (Concentrate for Electrodry employees): A neutral carpet and upholstery cleaning prespray for hot water extraction cleaning.

- Dilute with water 1:1 and apply to the carpet, agitate with a carpet rake or brush underneath the rotary machine and allow 10 minutes dwell time before cleaning

Electro-Shield:

- Dilute 1:10 with water and apply 300ml per standard 13 square metre room. Agitate into the carpet after application
